

# EMPLOY ROBUSTA RPA TO AUTOMATE ROUTINE TASKS AND EMPOWER INNOVATION

*No matter which industry you are in, leave your routine workload to the virtual workforce of Robusta RPA! As a technology-agnostic product, Robusta RPA is capable of interacting with any IT system to automate mundane tasks and increase your business efficiency.*

Some operational activities are highly mundane tasks and consume company resources – both workforce and money. Why let your employees drown within routine transactions, while they can focus on value-adding tasks to drive innovation and efficiency? By interacting with IT applications just as a human would, Robusta RPA can open email attachments, transfer files, complete electronic forms, record and re-key data, transfer data to/from Excel files, extract data from different file formats or databases, make calculations, enter data to multiple applications, and perform other tasks that mimic human action.

**Assign “virtual employees” to mundane tasks and make room for innovation through automation. All you need is Robusta RPA!**

## ROBUSTA RPA OFFERS:

-  Affordable costs
-  High quality
-  Efficiency
-  Standardization
-  Expertise
-  Added value
-  Employee satisfaction
-  Error-free transactions
-  Rapid deployment

## Eliminate transactional errors

Routine transactions and tasks increase workload and consume time, thus preventing focusing on value-added and innovation-driven tasks. Robusta RPA offers an **economical** solution to this problem by creating an **error-free, time-saving** virtual workforce. Available for all business units, from finance to human resources, production, and purchasing, Robusta RPA rapidly automates business processes, while also minimizing human errors in transactions.

## Gain cost advantage

Once a business starts to manage processes via Robusta RPA with predefined and instantly modifiable instructions, its **efficiency** increases by an average of **40 percent**. This increase translates into a **cost advantage** both in the workforce and business processes, reaching **80 percent**. In addition, Robusta RPA can be rapidly and cost-effectively adapted to meet diverse requirements of businesses.

## Easily deploy Robusta RPA on every system

As a **platform-independent** solution, Robusta RPA can be integrated into all IT systems and solutions. Does your sales and marketing department use CRM? Or is your production department equipped with ERP? No matter what the system or platform is, all **data entry** can be **automated** via Robusta RPA. Not only business units, but also IT departments can benefit from this solution. With Robusta RPA, you can establish code-free interaction with all databases, call web services of existing applications easily, open Robusta-based processes to others as web services.

## Start using the system in just a few days

Robusta RPA does not need any modifications in your existing IT system. As the system is developed for the benefit of end-users and brings no extra costs, it does not require IT know-how or code development. All you need to do is to design your processes on Robusta design studio either as **scripts** or **flow diagrams**. Just like an operations employee learning and implementing processes, Robusta RPA learns all processes and performs all duties **24/7**.

## AUTOMATED FRONT-END FOR ENTERPRISES: ROBUSTA CHATBOT

Not only internal operations, but also front-end applications create unnecessary burdens and costs for companies. The solution is Robusta Chatbot. In full integration with Robusta RPA, Robusta Chatbot facilitates communication with employees, customers or suppliers by enabling easy identification of workflows and **creation of communication scenarios**. For instance, when a customer requests a report via WhatsApp or other messaging platforms, Robusta Chatbot confirms the identity of the customer, **understands the request** and receives the requested information via Robusta RPA, without any system integration with IT applications. Then it sends the information back to the customer through the same communication channel in various formats, including Word or PDF.

### Robusta

Robusta is a next-generation technology company that offers digital workforce solutions. Combining advanced engineering with a user-oriented approach, the company provides Robotic Process Automation, Cognitive Automation and Corporate Chatbot solutions since 2017. Robusta products are used in various industries, from finance to telecommunication and energy.
