

NEXT-GENERATION AUTOMATION
FOR FLAWLESS
BUSINESS PROCESSES

Securitas Turkey transfers all its OGNET notification processes to Robusta RPA.

Robusta's Solution

Securitas Turkey transfers all its OGNET notification processes to Robusta RPA.

With Robusta RPA's complete and unerring processing of all OGNET notifications, this operational process which required substantial time during office hours can now be executed with the software robot round-the-clock, improving resource efficiency by 2.5 times.

Current State

With the Turkish Police Department's latest security directorate, all companies servicing in the private security sector are bound to disclose the hiring and termination of employees, companies each employee is assigned to, termination notice of their assignments and further details through the Private Security Information Automation System, OGNET, on a real-time basis.

In cases of misinformation or insufficient disclosure of information on the Private Security Information Automation System (OGNET), private security companies can be faced with serious fines and penalties.

Employing a workforce of more than 20 thousand, processing, cross-checking and sending all OGNET notifications required extensive resources for Securitas.
